DSA – Data Structures & Algorithms

Become Strong in Coding and Problem Solving in 2 Months

Learn Arrays · Strings · Linked List · Stack · Queue · Tree · Graph · Algorithms

Coding Practice

Interview Preparation

Logic Building

Enroll Now

Your Gateway to Confident, Interview-Ready Coding

This DSA course is meticulously designed for **students, freshers, career switchers, and working professionals** who want to sharpen their coding logic, master problem-solving techniques, and excel in technical interviews. Over 2 focused months, you'll build an unshakeable foundation in data structures and algorithms — the core of every software engineering role.

Students will systematically learn core data structures, essential algorithms, time and space complexity analysis, coding patterns, and real-time interview-style problems — from the very basics to interview-ready confidence.

- 📌 **Master DSA from Basics to Interview-Level Problem Solving** — a structured, mentor-guided journey built for real outcomes.

Built for Beginners. Designed for Interview Success.

Why Choose XpertsEdge?

→ Beginner-Friendly

Clear, step-by-step concept explanations from scratch

→ Daily Coding Practice

Interview-focused problems with pattern-based approach

→ Dry Run & Complexity

Visual walkthroughs and time complexity understanding

→ Mock Interview Support

Simulated coding rounds with real interview questions

Who Can Join?

Students & Freshers

Build coding fundamentals before entering the job market

Java / Python / JS Learners

Apply DSA concepts in your preferred language

Career Switchers & Professionals

Strengthen technical skills for developer roles and interviews

A Complete DSA Curriculum — From Fundamentals to Interviews

Basics

- Programming logic & dry run
- Time & space complexity
- Recursion fundamentals
- Problem-solving approach

Linear DS

- Arrays & Strings
- Linked List
- Stack
- Queue

Non-Linear DS

- Binary Tree & BST
- Heap basics
- Graph representation
- BFS & DFS basics

Algorithms

- Searching & Sorting
- Two Pointer & Sliding Window
- Hashing & Recursion
- Backtracking basics

6 Structured Modules — Progressive, Practical, Interview-Focused

01

DSA Fundamentals

Logic building, dry run technique, complexity analysis, and problem-solving approach

03

Linked List, Stack & Queue

Singly linked list, stack operations, queue operations, and real-time problem solving

05

Trees & Graph Basics

Binary tree, BST, traversal techniques, graph representation, BFS and DFS

02

Arrays & Strings

Array operations, string problems, two pointer, sliding window, and hashing patterns

04

Searching & Sorting

Linear and binary search, bubble/selection/insertion/merge sort fundamentals

06

Interview Preparation

Coding patterns, common interview questions, mock coding practice, and resume project explanation

Your 2-Month DSA Success Roadmap

A clear, milestone-driven journey — from coding beginner to interview-ready problem solver in just 8 weeks.

Month 1 — Foundation & Linear DS

Master time complexity, arrays, strings, linked list, stack, queue, searching, and sorting fundamentals

Month 2 — Advanced DSA & Interview Prep

Conquer recursion, trees, graph basics, hashing, coding patterns, mock problems, and full interview preparation

Final Badge — Interview-Ready Problem Solver

Graduate as a confident coder who can tackle technical rounds, explain logic clearly, and solve real-world problems

MONTH 1

Month 1 — Foundation & Linear Data Structures

Month Focus: Build strong coding logic and master linear data structure basics from the ground up.

Topics Covered

- Problem-solving approach & dry run method
- Time complexity & space complexity
- Arrays, Strings, Two Pointer, Sliding Window
- Hashing basics & frequency patterns
- Linked List — singly, operations, reversal
- Stack & Queue — operations and problems
- Searching & Sorting fundamentals

Month 1 Outcome

By the end of Month 1, students can confidently solve **beginner to intermediate coding problems** using arrays, strings, stack, queue, and sorting concepts — a solid foundation for advanced topics ahead.

An illustration of a person with dark hair, wearing an orange long-sleeved shirt and orange pants, sitting in a black office chair at a desk. They are looking at two computer monitors. Both monitors display a graph structure with black nodes and lines, and some nodes are highlighted in orange. The person's hands are on a keyboard. The desk is light-colored, and there are two dark green storage bins under it. The background is dark.

MONTH 2

Month 2 — Advanced DSA & Interview Preparation

Month Focus: Transition into interview-level DSA practice with confidence, depth, and real coding scenarios.

Topics Covered

- Recursion & Backtracking basics
- Binary Tree, BST, Tree Traversal (inorder, preorder, postorder)
- Heap basics & priority concepts
- Graph representation, BFS & DFS
- HashMap problems & advanced hashing
- Pattern-based coding strategies
- Mock coding questions & interview prep

Month 2 Outcome

Students graduate with the ability to **understand advanced DSA concepts, solve interview-style problems under pressure, and explain their logic clearly** — exactly what top tech companies expect in technical rounds.

Structured Practice Sets — Build Speed, Accuracy & Confidence

Every module is reinforced with targeted practice problems that mirror real coding interview questions. Solve, review, and master.

Practice Set 1 — Arrays & Strings

Reverse array, find max/min, detect duplicates, frequency count, palindrome check, anagram detection, and substring problems

Practice Set 2 — Stack, Queue & Linked List

Valid parentheses, stack and queue implementation, linked list insert/delete/reverse, and real-time problem scenarios

Practice Set 3 — Trees & Graphs

Tree traversal (BFS/DFS), BST search and insert, graph representation, breadth-first and depth-first traversal basics

Join XpertsEdgeTechnologies — Start Your DSA Journey Today

Build strong coding confidence, master data structures, and walk into any technical interview fully prepared.

Better Coding Logic

Think algorithmically and solve problems with clarity and speed

Strong Interview Prep

Practice real interview-style questions and mock coding rounds

Career-Ready Skills

Ideal for developer roles, technical rounds, and software jobs
