Microsoft Azure Azure Administrator Track

Become Cloud-Ready in 2 Months · Azure Basics · Virtual Machines · Storage · Networking · Identity · Monitoring

Hands-On Labs

Practice directly on the Azure portal with guided lab exercises

Real-Time Project

Build and present an end-to-end Azure admin architecture project

Interview Prep

Resume support, mock interviews, and Azure Q&A coaching

Enroll Now · ☎️ 8870783300 · 📍 Anna Nagar

Who Is This Course For?

The **Microsoft Azure Administrator Track** is a comprehensive, beginner-friendly program designed for students, freshers, career switchers, developers, testers, IT support engineers, and working professionals who are ready to build a solid foundation in cloud administration. No prior cloud experience is required — only the desire to learn and grow.

What You Will Learn

- Azure fundamentals and cloud concepts
- Resource groups, subscriptions, and portal navigation
- Virtual Machines, storage accounts, and virtual networks
- Identity, access management, and RBAC
- Monitoring, backup basics, and cost management
- Real-time cloud project practice
- Resume support and interview preparation

- ❏ Learn Microsoft Azure Administration from Basics to Real-Time Project Level — in just 2 months of structured, hands-on training.

Course Snapshot

- Duration: 2 Months
- Format: Instructor-led, hands-on labs
- Location: Anna Nagar
- Contact: 8870783300

Why Choose This Course + Who Can Join

Why Choose XpertsEdge Azure Track

- **Beginner-Friendly**
Start from zero cloud knowledge with a structured curriculum
- **Hands-On Portal Practice**
Every concept reinforced with direct Azure portal exercises
- **Real-Time Project**
Deploy an end-to-end Azure admin solution as your capstone
- **Resume & Mock Interview**
Personalized career support to get you job-interview-ready
- **Cloud Career Guidance**
Understand cloud job roles, salary benchmarks, and pathways

Azure Topics Covered

The curriculum spans the four essential pillars of Azure administration — from cloud fundamentals to enterprise-grade monitoring and management.

1

Azure Basics

- Cloud Computing Concepts
- Azure Overview & Portal
- Subscriptions & Resource Groups
- Regions & Availability Zones

2

Compute & Storage

- Azure Virtual Machines
- VM Images & Disks
- Storage Accounts & Blob Storage
- File Share & Backup Basics

3

Networking & Security

- Virtual Network & Subnets
- Network Security Groups
- Public IP & Load Balancer
- Microsoft Entra ID & RBAC

4

Monitoring & Management

- Azure Monitor & Log Analytics
- Alerts & Cost Management
- Azure Policy Basics
- Resource Tags & Deployment

Course Modules

Module 1

Azure & Cloud Fundamentals

Cloud concepts, Azure overview, subscriptions, resource groups, regions, and portal navigation.

Module 2

Identity & Access Management

Microsoft Entra ID, users, groups, roles, RBAC basics, MFA, and access control policies.

Module 3

Azure Virtual Machines

VM creation, images, disks, networking, NSG configuration, RDP/SSH basics, and VM management.

Module 4

Azure Storage Services

Storage account, blob storage, file share, access keys, storage security, and backup basics.

Module 5

Networking & Monitoring

Virtual networks, subnets, public IP, load balancer basics, Azure Monitor, alerts, and logs.

Module 6

Real-Time Azure Admin Project

Create resources, configure VM, storage, networking, access, monitoring, and present the project end-to-end.

Your 2-Month Azure Administrator Success Roadmap

A carefully structured two-month journey takes you from zero cloud knowledge to a confident, project-ready Azure administrator — step by step.

  Final Badge: Beginner → Cloud-Ready Azure Administrator — with a real project portfolio and interview-ready skillset.

Month 1 — Azure Foundation Month

Focus: Build a strong Microsoft Azure and cloud administration foundation with hands-on portal practice every session.

Topics Covered

- Cloud computing introduction & Azure overview
- Azure portal navigation & subscriptions
- Resource groups, regions, and availability zones
- Microsoft Entra ID basics — users and groups
- RBAC basics & MFA fundamentals
- Azure Virtual Machine creation
- Disks, images, and VM management
- Storage account creation & Blob storage basics

Month 1 Outcome

By the end of Month 1, students will be able to:

1 Understand core Azure concepts

Explain cloud computing, Azure architecture, and resource hierarchy

2 Create and manage resources

Launch VMs, configure storage accounts, and manage resource groups

3 Set up identity and access

Create users, assign roles, and apply basic RBAC and MFA policies

Month 2 — Project + Career Month

Focus: Become fully cloud-ready through real-time Azure admin project practice, networking, monitoring, and structured career preparation.

Topics Covered

- Virtual network basics, subnets, and NSG
- Public IP and load balancer basics
- Azure Monitor, Log Analytics basics, and alerts
- Backup basics and cost management fundamentals
- Resource tags and deployment basics
- Real-time Azure admin project practice
- Resume preparation and mock interview sessions
- Azure administrator interview Q&A coaching

Month 2 Outcome

By the end of Month 2, students will be able to:

1 Manage Azure networking

Configure VNets, subnets, NSGs, and public IPs for deployed resources

2 Monitor cloud resources

Set up alerts, review logs, and understand cost management dashboards

3 Present real-time project

Explain end-to-end Azure admin workflow in an interview setting

Real-Time Azure Project Practice

All students complete three progressive, hands-on lab projects that mirror real-world Azure administration tasks — building a practical portfolio for job interviews.

Project 1 — Azure Virtual Machine Deployment

Create a resource group, deploy a virtual machine, configure disk and public IP, set up a Network Security Group, and connect securely using RDP/SSH. Students walk away knowing how to provision and manage a cloud server from scratch.

Project 2 — Azure Storage and Backup Practice

Create a storage account, configure blob storage containers, upload and manage files, understand access keys and storage security settings, and explore basic backup and recovery options within Azure.

Project 3 — Basic Azure Admin Architecture

Create a complete mini-architecture: deploy a VM, attach storage, configure a virtual network with NSG, set up Microsoft Entra ID access and RBAC roles, configure monitoring alerts, and present the full admin workflow as a capstone project.

Start Your Cloud Journey Today

Join **XpertsEdge Technologies** and take the first step toward a rewarding Microsoft Azure cloud career — with real skills, a real project, and real career support.

Azure Administrator

Fresher-level cloud admin roles in enterprise environments

Cloud Support Associate

Provide Azure infrastructure support and troubleshooting

Junior Cloud Engineer

Deploy and manage basic cloud resources and services

Azure Support Engineer

Assist teams with Azure portal, access, and VM management

Cloud Operations Associate

Monitor cloud health, alerts, and cost optimization

Sysadmin with Azure Skills

Extend traditional IT roles with modern cloud capabilities

Learn. Configure. Manage. Monitor. Become Cloud-Ready.
